Portfolio

SUMMARY

Hands-on technical professional with over five years of continuous growth at TACTICASOFT, from IT support to senior consultant and now product development lead. I know the business and the customer from the inside — I implemented, configured and trained +50 companies across the region, from sole proprietorships to firms handling foreign trade— and I build the tools: end-to-end CRM/ERP solutions with applied AI, APIs, data analysis and UX. Currently pursuing a Bachelor's in Computer Science (UNQ).

EXPERIENCE

TACTICASOFT — Frontaction Argentina S.R.L.

Data Analyst · UX Designer · Frontend Developer

Apr. 2025 – Present

- Lead end-to-end development of new tools: requirements gathering and analysis, UX design, development, and technical and user documentation.
- Designed and built the TACTICA MCP: a 39-tool server that lets an AI assistant query the ERP's entire commercial workflow in natural language, with role-based permissions, MySQL and SQL Server editions, a Windows installer and setup/user guides. Now launching to clients.
- Conceived and designed (usage logic and UX) the Tickets and Suggestions web portals, integrated with the ERP and in production with clients; supervised backend development.
- Built the TACTICA GPT, an AI assistant for the consulting team grounded in a custom knowledge base (system documentation and training-session transcripts); used daily by the team.
- Developed in C# / .NET 8 the MRP engine for a production module (multi-level bill-of-materials explosion and work orders), with a REST API and automated tests.
- Built a WhatsApp chatbot (Java/Spring Boot, Twilio, GPT-4o), precursor of the MCP, and documented the full database schema (280 tables, ~3,775 columns) in a navigable data dictionary.
- Data analysis: data-quality audits for client migrations and custom SQL reports (billing, purchasing, activities).

Senior Consultant

May 2023 – Apr. 2025

- Led full-cycle (end-to-end) deployments for clients of every size, from sole proprietorships to companies engaged in foreign trade and imports.
- Designed complete operational workflows for sales, purchasing, contracts and inventory control, integrating e-invoicing and Argentina's tax authority services (ARCA, formerly AFIP).
- Trained +50 companies across the region through webinars and on-site sessions, with custom configurations.
- Wrote, structured and edited user manuals and official technical documentation for clients, end-to-end.

IT Support Specialist

Aug. 2021 – May 2023

- CRM/ERP support: databases (MySQL / SQL Server), networking, email (IMAP/POP3) and hands-on customer service.

EDUCATION

Bachelor's in Computer Science — Universidad Nacional de Quilmes (UNQ)

In progress

Technical Degree in Avionics — E.E.T. N.º 7 "TRQ" IMPA, Quilmes

2014 – 2020

Technical foundation in electronics, telecommunications and programming, with projects applied to aeronautics.

LANGUAGES

Spanish native **English** C1 — Cambridge B2 First (FCE), Grade A **German** intermediate, written (B1/B2)

AWARDS

Gold Medal — ONIET 2020 (National Olympics of Innovation, Informatics, Electronics & Applied Technology), Prototypes III category. 1st place nationwide with the project "Ojo de Van Gogh".

SKILLS & TOOLS

Applied AI: LLM integration (Claude, OpenAI, Gemini), MCP, custom GPTs and knowledge bases, AI-assisted development.

Languages & frameworks: Python, C#, Java, SQL, JavaScript, HTML/CSS · .NET 8 / ASP.NET Core, FastAPI, Spring Boot.

Data & integration: MySQL, SQL Server, REST APIs, Twilio, PyInstaller, Inno Setup, Git.

Product & CRM/ERP: UX design, requirements gathering, documentation, operational workflows, e-invoicing (ARCA).
